DETAILED ACTION

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1-4 rejected under 35 U.S.C. 103(a) as being unpatentable over Zhang (6,855,954) in view of Cho et al. (6,391,693).

Regarding Claims 1-4, Zhang discloses a thin film transistor and liquid crystal display having the thin film transistor where in Fig. 1C it is disclosed a gate 4 disposed on the substrate, a gate dielectric layer 6 disposed on the gate, a pattern semiconductor layer 8, a patterned, silicon dioxide or silicon oxide, insulating layers 10 and 11 and an ohmic layer (p or n type) 12 disposed on the silicon layer. Passivation layer 14 covers insulating layers 10 and 11. Zhang fails to disclose the required configuration where the central portion of the channel semiconductor layer is polysilicon and the side portions are amorphous. However, Cho et al. disclose a method for making polysilicon thin film transistor having multiple gate electrodes where in Fig. 2E, polysilicon channel region 18 (the middle portions) and adjacent amorphous portions 18a-18c are disclosed.

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required polysilicon center portion and the amorphous side portions for the channel region in Zhang as taught by Cho et al. in order to have a thin film transistor structure with increased reliability.

Application/Control Number: 10/710,844

Art Unit: 2826

Regarding Claim 2, passivation layer is labeled as 14 in Zhang Fig. 1C

Regarding Claim 3, ohmic contact layer 12 of Zhang Fig. 1C is either n or p type

Regarding Claim 4, insulating layer 6, 10 and 11 are disclosed to be either silicon

oxide or silicon nitride in Zhang as disclosed in column 1

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Fazli Erdem whose telephone number is (571) 272-1914. The examiner can normally be reached on M - F 8:00 - 5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nathan Flynn can be reached on (571) 272-1915. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
